OVERVIEW FOR MANAGERS

Draw the weld joint detail and pass sequence of your WPS

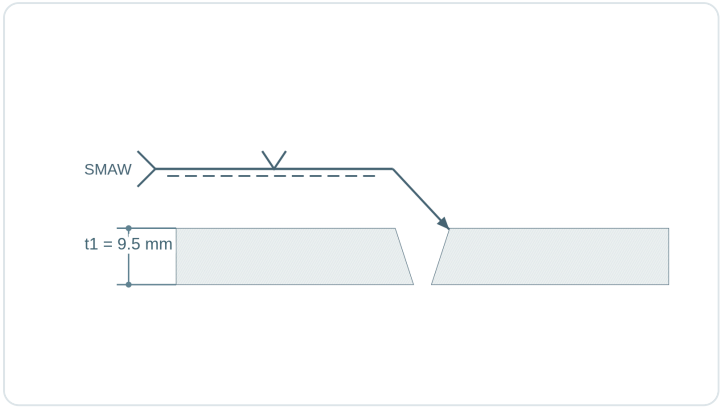

166	44	62	EN · ES
joint geometries	complete templates	library elements	English and Spanish

THE PROBLEM

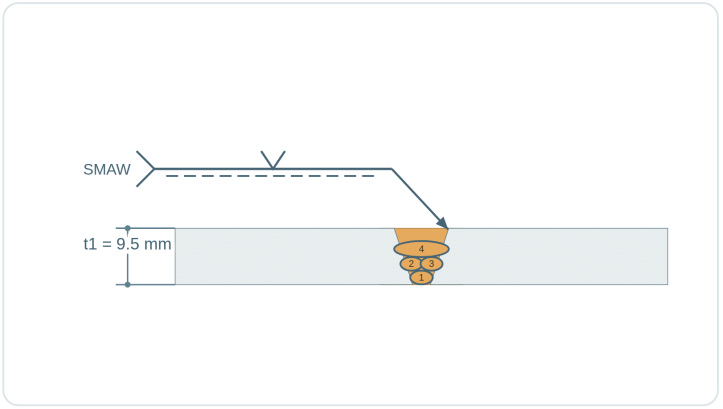

Every WPS needs its joint detail and pass sequence. Today they are drawn by hand, in a generic editor or copied from another procedure: the result is inconsistent, hard to review and almost impossible to audit.

THE SOLUTION

WeldSketch standardizes those sketches in the browser, with a catalog of 166 geometries, 44 complete templates and AWS A2.4 / ISO 2553 symbols. Export to PNG, SVG or A4 PDF, in English or Spanish.

Joint detail

Pass sequence

WHAT YOU GAIN

- **Consistency across the team.** Everyone draws with the same joint catalog, the same symbols (AWS A2.4 / ISO 2553) and the organization's templates.
- **Control and traceability.** Per-person roles (owner, administrator, editor, viewer), an organization activity log and mandatory two-step verification if you require it.
- **Deliverables ready to use.** PNG with white or transparent background, vector SVG and an A4 PDF sheet with the joint detail and the pass sequence.
- **No rework.** Drawings are saved in the cloud with version control: nobody overwrites someone else's work.

CONTROL FOR YOUR TEAM

- **Per-person roles.** Owner, administrator, editor or viewer: everyone can do what they should.
- **Shared templates.** Your standard joint detail, available to the whole organization.
- **Activity history.** Who created, changed, exported or deleted each drawing, and from where. It cannot be modified.
- **Mandatory second factor.** Require two-step verification for everyone in the organization.
